Straighter teeth can lead to:

Healthier Gums – Invisalign aligners are removable so patients can brush and floss normally which can help prevent periodontal disease and tooth decay. Research has shown that gingival health may improve during Invisalign treatment.

Easier Cleanings – The chances of having plaque retention, tooth decay and periodontal disease can be reduced with properly positioned teeth.

Less Stress – Properly aligned teeth are less stressful on the supporting bone and provide better function. Invisalign offers an alternative to aggressive, restorative solutions for orthodontic problems.
